

## CSE 382

### Exercise - ListView C# Template Modifications

Copy the Git repository name ListViewCSTemplate into your personal Git repository. Modify it as described below.

What to submit: Make sure you commit and push your source code. In addition, submit a demonstration video to Canvas. In your demonstration, interact with each control in sequence. Both of them need to be submitted by the due date.

1. The original ListView from Git Project ListViewCSTemplate is shown on the left.
2. Alter the template so that it looks like the one on the right. (Do this by adding a new method named ConfigureListView2, which configures the template.)
3. Display the school's URL in a label (see bottom of GUI) when tapped in the ListView.
4. Add a WebView control that displays the school's web page when tapped. Here is a [document](#) that we previously saw that shows how to put a WebView in your GUI.
