

CSE 382

Exercise - Improved Number Pad

In your last exercise, you modified the XAML project to have a rudimentary number pad. Modify that project to use the GridLayout. The number pad should look like the one shown (match the size of the buttons, corners, text color, text size, and background color). Like before, your app must support the button clicks and display of the number in the Label at the top.

Commit the code to Git and submit a 1 minute video demonstrating the following sequence:

- 1234 clear
- 00001231 clear *do not display leading 0's on your GUI*
- 1 clear
- 9 clear
- 3456 clear
