CSE 382
Exercise - Picker

Copy the Git repository name `PickerDemo` into your personal Git repository. Modify it as described below. Make sure you submit both your video and Git submission by the due date.

Alter PickerDemo so that it looks like the one below. (You can comment out the code for the color, size, and student pickers.). The image on the left shows the picker at the top and WebView below. The second image shows the picker activated (for iOS, it appears at the bottom of the screen). The third image shows the GUI after selecting UC.

- ○ Display a picker with four school choices (Miami and three others). When selected, the WebView will display the selected school's main webpage.
- ○ The picker will not display the URL, but the underlying School structure will store it.
- ○ Here is a document that we previously saw that shows how to put a WebView in your GUI.
