**CSE 382**
**Exercise - TrainingDB Modifications**

Use TrainingDB as a starting point for this exercise.

When done, commit your TrainingDB to Git and submit a video demonstrating your working code. In your video, make sure you show the query for the 4th one(i.e., "long runs")

- Write the code for the following queries in the QueryPage code behind:
  - List the Running activities that are 1 hour or longer
  - List the dates (you can also display a time if you wish) where 1+hr running activities took place
  - List the dates and durations of running activities that are 1+hr long.
  - List running activities that are considered "Long", which is defined by the time in Table<LongActivityDefinition>
  - List activities that required 500+ calories.
